Gujarat, India | khushalvaghamsshi7@gmail.com | [Portfolio](#)

SUMMARY

AI Full-Stack Developer building **internal AI tools, agents, and automations** for **DTC e-commerce brands** across ad operations, AI creative pipelines, marketplace data, and customer support. Ships production tools end to end with **Claude Code**: LLM integration, **RAG**, and integrations with Meta Ads, Amazon SP-API, Shopify, and Walmart. Works **directly with founders**, marketing, and ops teams to turn manual workflows into working software, usually **in days**.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, shadcn/ui

Backend & APIs: Node.js, Express.js, REST APIs, Meta Ads API, Amazon SP-API, Walmart API, Shopify API, Stripe

Databases: Supabase, PostgreSQL

AI Engineering: Anthropic API (Claude), structured outputs, tool use / agents, RAG, prompt engineering, Claude Code, Jev (TypeSafe), Composio, Hermes

Automation & AI Media: n8n, Apify, ClickUp, Higgsfield, Veo 3, ElevenLabs

Cloud & Deployment: Vercel, VPS, Docker

EXPERIENCE

AI Full-Stack Developer · Hustle AI

Freelance · Remote

React · Next.js · Node.js · Supabase · Meta Marketing API · Higgsfield · Veo 3 · ElevenLabs

- Built a **multi-account Meta Ads CRM** that connects multiple **Business Managers** and **ad accounts** to one dashboard, replacing tab-switching across Ads Manager for the media buying team.
- Built **bulk launch** workflows that create **campaigns, ad sets, and ads across multiple accounts** in one flow.
- Built an **AI creative pipeline** with **Higgsfield, Veo 3**, and **ElevenLabs** that generates image and video ads with voiceover and pushes them straight into campaigns.
- Built **rule-based automation** that pauses, scales, and adjusts budgets and bids from performance thresholds, removing manual campaign monitoring.
- Built **AI creative scoring** using **LLM structured outputs** to rate creatives, CTAs, and campaigns, so the team finds winning ads and scales them faster.
- Worked **directly with the founders** and media buyers to scope features, prioritize the roadmap, and own tools from idea to production.

AI Developer · Mini Mic Pro

Freelance · Remote

Next.js · Node.js · Supabase · Amazon SP-API · Walmart API · Shopify API · Anthropic API · Stripe · n8n · Apify

- Partnered **directly with the founder** to build **Thread AI**, a multi-marketplace seller CRM where sellers connect **Amazon, Walmart, and Shopify** to manage **products, orders, and customer feedback**, with **Stripe** monthly subscriptions.
- Built an **AI support agent** with the **Anthropic API**, **tool use**, and **RAG** over company policies and product data that auto-resolves routine customer queries.
- Added **human-in-the-loop guardrails**: payment-related queries are routed to **ClickUp** tickets for team approval before any reply goes out.
- Tested the agent against **edge cases** (refunds, ambiguous orders, policy conflicts) and iterated on prompts and retrieval to improve accuracy and reduce **token cost**.
- Built **n8n workflows** that scrape competitor ads with **Apify** and generate new ad concepts and media.

PROJECTS

Sorta – AI Gmail Triage

[Live](#)

Next.js · TypeScript · Supabase · Jev (TypeSafe) · Composio · shadcn/ui

- Built a multi-user **Gmail triage app** where users define inbox categories in **plain English** and **Jev** sorts every email into them instantly.
- Used **Jev's typed answers and calibrated probabilities** instead of generated text to label scams, spam, promotions, and newsletters, enabling a **one-click junk sweep** with undo.
- Added **needs-attention scoring** and natural-language **"Ask Jev" search**, with Gmail access through **Composio** OAuth and **Supabase row-level security** isolating each user's mail.
